ABSTRACT-This framework is developed for proper organization and maintains the activities related to prisons. The purpose is to design a system that provides basic functionalities for storing and accessing the information related to prisons. This system allows one to access and search for the required information very easily. The system allows generating various reports of criminals. This system is the reinstate of the manual system. Incarceration in prison, also known as a penitentiary, is the sentence that courts most frequently enforce for vital crimes, such as criminal act. For lesser offense, courts mostly inflict short-term internment in a prison, or correction center as mentioned in [7].

Keywords – Conservancy, Demographic, Nominal roll, Parole, Penitentiary.

I. INTRODUCTION

The purpose of this paper is to develop an application for maintenance of the prison system. This application consists of various registers, reports for effective operations of prisons. And police/employee can see crime/criminals reports for their purpose. A prison is a place in which people are kept forcefully in a prison as punishment for a crime they. Prisons are buildings or institutions, in which criminals get punished for the crime they have committed. Prisons are also called as a remand center for the criminals. The punishment for the criminals is based on the crime they have committed and prisons are also called as retention center as mentioned in [6].

In existing system it is tedious process because all the work was done manually. Less secured so the proposed system is introduced to overcome the problems of existing system. In a proposed system the work is automated which is easy and secure to access. This system is fully automated and designed in a simple so that it can be accessed easily. Authentication is given so that only the registered members can access this application. Without the username and password the employees of jail cannot access this application.

II. SYSTEM DESIGN

In this paper the proposed system is divided into two parts
1) Administration
2) Employee/police officer.

Prisons are also called as corrections center for the criminals as mentioned in [7]. In Fig3.Admin is the super user in this system .Admin can register an employee based on their designation and department. Admin can view all the information of users and criminals. Admin can view all the registers of criminals like parole register, case register, duty register etc...And admin can make changes to these registers. He can easily know about the criminal which reason he has arrested or other related information.

Fig2. Use case diagram

Fig3. Level 1 Data flow diagram for admin

Fig2. And Fig3. Discuss about the role of admin and employee in this application

In this paper the proposed system is divided into two parts

1) Administration
2) Employee/police officer.

Prisons are also called as corrections center for the criminals as mentioned in [7]. In Fig3.Admin is the super user in this system .Admin can register an employee based on their designation and department. Admin can view all the information of users and criminals. Admin can view all the registers of criminals like parole register, case register, duty register etc...And admin can make changes to these registers. He can easily know about the criminal which reason he has arrested or other related information.
Admin can view the Criminal case details. So that he can know which case is going on the particular criminal. Admin can view the Criminal court details so that he can know in which court the particular criminal’s case is going on. Through court details, he can know when the next hearing of particular criminal. Admin can also view/modify the employee details and can assign duties for the employees. He can view registered employee details where he can know when employee has join and other necessary information of employees. Admin can add department details like, Jail, Account, and Mess etc. He can add different type of designations also.

From Fig2. Employee should login first by giving valid username and password to access the application. He can view his profile and can modify necessary changes. Employee can register a new criminal and maintains all the information of criminals. He can assign a task or work to a criminal. He can update/delete the criminal’s information. Employee should maintain the records of all the criminals. The details include like case details, duty details, and released criminals details.

Salary details of an employee are stored in salary database. Employee can only view his salary details, per month salary, total amount calculated after increment and decrement per month. He can just view his total salary.

III. GRAPHICAL USER INTERFACE

Fig4. Admin registers new employee:

Fig4. Explains how the admin adds new user. Admin registers new employee by giving all the details of an employee and assigning a password for employee. This form will be filled by the admin because admin has the power to assign id and password for the employees. So if the admin needs to add a user he should register first and assign id and password to the employee so that he can access the application. The details include the name of employee, his personal details like date of birth, marital status etc.
duty id, day of duty, time of duty and place of duty of a criminal. Jail is a place where the criminals should work over there and they will be paid for it. These details will be assigned by the employee when and where a criminal should complete his duty and time of their duty.

IV. CONCLUSION

This framework helps in implementation of central and state prisons. Retaining crucial information in the files and manuals is full of risk and a tedious process, so to overcome the problems of the manual system the new system switched the manual system to a software solution. It automates the operations carried out in the prisons, and maintenance of prisons in a proper and automated way.

VI. ACKNOWLEDGMENT

The authors of this paper are thankful to the Management, RRGI, Bangalore and Principal, RRCE, Bangalore for their continuous encouragement and support throughout the work.
